Shade alone can reduce overall exposure to the sun's harmful UV radiation by up to 95%. UV protection is a critical issue for businesses who need to meet stringent health and safety regulations and also create cool, usable outdoor spaces.

Shade sails are recognized as a light, airy and sculptural alternative to traditional walls, fences and roofs. They can also be effectively designed as privacy screens for overlooked apartments or gardens.

We Can Offer Businesses

- Melbourne showroom with shade displays, material and colour samples.
- End-to-end support on the full design and installation process.
- Manufacturing of shade sails to your specifications.
- All our materials are premium grade, designed for use under tension and carry a 10 year manufacturers warranty. We supply canvas, architectural grade polyester mesh, solid PVC or waterproof materials. High quality UV stabilised thread or high frequency welding is used to give clean, durable, watertight seams.
- All sail fixings are made of non-rusting stainless steel. Poles and brackets are non rusting galvanised or powder coated steel.
- CAD driven design and precision cutting.
- On site visit or a review of your planned designs to provide advice on;
 - optimum shade design,
 - construction requirements and any limitations,
 - initial quotation and lead times.
- CAD files of the finished design.
- Local manufacturing and precision cutting on-site in our Melbourne factory.
- Long established team of specialist staff and 1500m² of manufacturing capacity.
- Engineering certification and professional installation.
- Competitive trade prices.
- 5 year warranty on our workmanship.

We supply shade solutions for:

- Childcare and school play areas
- Car parking structures
- Staff smoking and balcony areas
- Council parks and gardens
- Pools
- Outside eateries
- Entrance ways
- Nurseries
- Shopping malls
- New housing developments

Eclipse

We have developed a new freestanding shade sail structure called 'Eclipse' which is even less intrusive than a standard shade sail. This design combines a central cross-piece supporting structure which uses two supporting poles instead of four.

Our New 'Floating' Two Pole Shade Sail

Less potential for collision damage with poles. Ideal for car-parks and Kindergartens.

Easy to position. The sail 'floats' over nearby walls.

No weight bearing fixings needed on roofs or external walls.

Relocatable if shade needs change. A modified design can be unbolted from its footings and moved.

Less holes to dig. Only two foundation holes needed instead of four.

No bracing supports needed. For concrete foundations the poles bolt directly onto the base plate.

Engineer certified. Poles are made of hot dipped galvanized steel – resistant to rain, salt corrosion and rust.

Easy to construct. Can be supplied in several sized kits suitable for building/construction staff or subcontractors.

For over 60 years Mulders have been providing schools, childcare centres, construction companies, councils and architects with a wide range of shade solutions.

We are a prominent member of the industry body for canvas, vinyl and synthetic products in Australia. We manufacture all sails, to quality standards, on-site in our Melbourne factory.

A series of overlapping sails can turn a problem into a fresh and contemporary design solution.

Our Products

- Custom designed shade sails including our new, two-pole, Eclipse design.
- End-to-end support on design and installation.
- Shade sails only – manufactured to your own specification and design.
- Sandpit covers – breathable covers to protect playground sandpits.
- Privacy screens made of UV shade material – for overlooked apartments or gardens.
- Drop-down see-through blinds.
- Motorized folding arm awning.
- Outdoor awnings and blinds custom made to fit.
